It is worth mentioning that DOS has revised the methodology of collecting data on agricultural prices through a specialized technical committee from DOS and the Ministry of Agriculture. This revision was based on the recommendations of the *Permanent Experts Committee for Agricultural Statistics*, which is part of the National Agricultural Strategy. To improve data quality, agricultural price data for all crops have been sourced from the central markets on a monthly basis. The year 2016 was adopted as the base year (2016=100), and the *Laspeyres Equation* was used to compute the index.
